KOLOSAL TAX 301

Advanced International Tax Planning & Cross-Border Structuring

Beyond headline rates — worked GILTI/BEAT calculations, FTC basket mechanics, Pillar 2 restructuring, multi-tier leveraging, and corridor-specific ETR walk-throughs for CFOs and tax directors.

JURISDICTIONS	TAX YEAR	LEVEL	SLIDES
US · CA · ID · BR · MX · AU · SG	2024 / 2025	Advanced	81

CONTEXT

Why Cross-Border Tax Architecture Matters

17pp	30pp	400%	15%	$500M
CIT SPREAD (SG 17% VS BR 34%)	WHT SPREAD (SG 0% VS US 30%)	MAX R&D DEDUCTION (SG EIS)	BEPS PILLAR 2 MINIMUM	US BEAT THRESHOLD

- Headline CIT rates tell less than half the story — the real cost includes withholding taxes, CFC regimes, interest caps (EIFEL/§163(j)), CAMT, and repatriation mechanics
- **ETR formula:** Local CIT + WHT on dividends/interest – Foreign Tax Credits – Treaty benefits – Structural optimizations
- **Example:** US subsidiary at `21%` CIT + `30%` branch tax = `44.7%` combined — vs Singapore subsidiary at flat `17%` with 0% WHT
- **New 2024/2025 complexity:** US CAMT (§55, 15% book minimum on ≥$1B groups), Canada EIFEL (ITA §18.2, 30% EBITDA cap), Australia new thin cap (30% EBITDA from July 2024), Singapore DMTT (Pillar 2 top-up from Jan 2025)

I

Tax Fundamentals & Rate Architecture

CIT RATES | SME REGIMES | VAT/GST | PAYROLL | BRAZIL CBS/IBS

Headline CIT Rates

HEADLINE CIT RATES

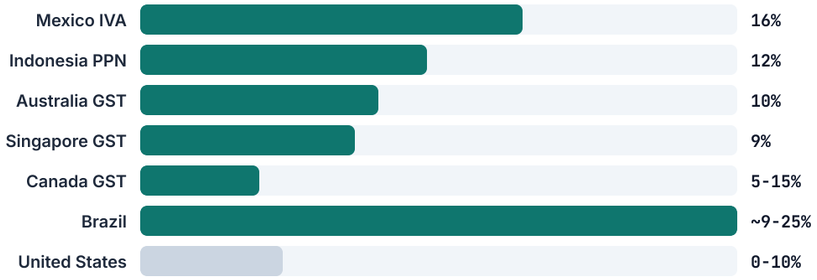
US CAMT: 15% corporate AMT on adjusted financial statement income for groups ≥$1B (IRC §55)

SME & Reduced Regimes

SME & REDUCED REGIMES

- **SG SUTE:** 75% exempt on first S$100K + 50% on next S$100K = effective `4.25%`
- **Canada SBD:** `9%` federal on first C$500K (ITA §125(1)) = ~12.2% combined
- **Indonesia MSME:** `0.5%` final tax on gross revenue ≤IDR 4.8B (PP 55/2022)
- **Brazil Simples:** `4-33%` progressive ≤R$4.8M (LC 123/2006)
- **Australia BRE:** `25%` vs 30% for turnover <A$50M

VAT, GST & Sales Tax Comparison

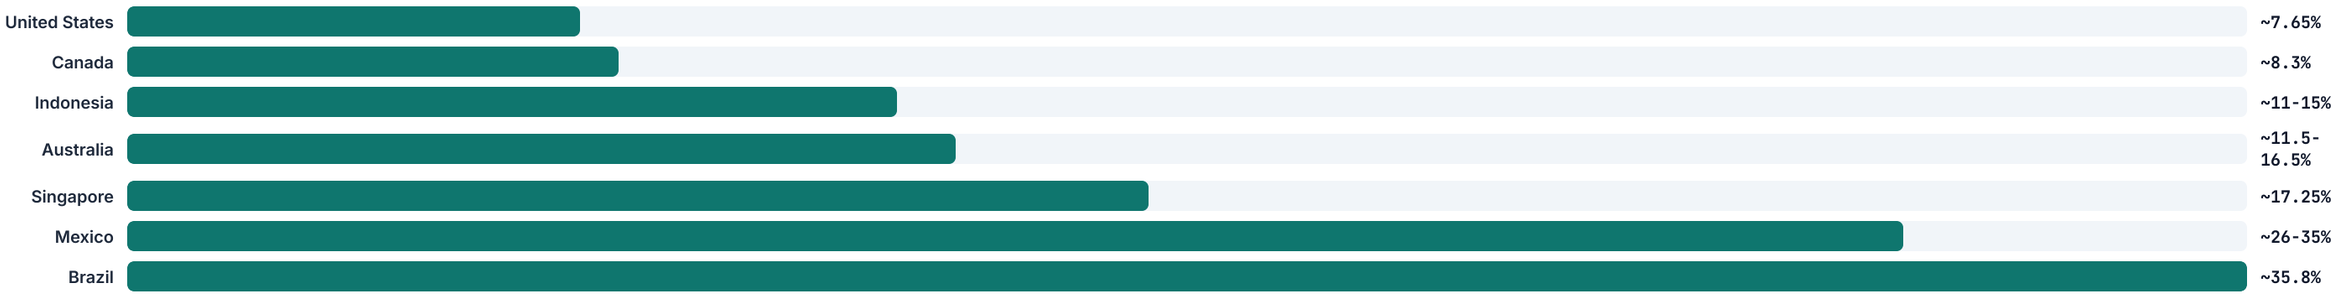


- **Mexico:** 8% in border zones; 0% on food, medicine, exports
- **Indonesia:** 12% from Jan 2025 (up from 11%); registration threshold IDR 4.8B
- **Brazil:** Complex multi-layer PIS/COFINS + ICMS + ISS; CBS/IBS reform replacing all by 2033 at ~26.5% combined
- **United States:** No federal VAT — state sales tax only; post-*Wayfair* nexus

EMPLOYMENT COSTS

Payroll & Employer Social Contributions

7.65%	17.25%	~30%	35.8%
US (LOWEST)	SINGAPORE (CPF)	MEXICO (IMSS+)	BRAZIL (HIGHEST)



Key insight: Singapore CPF applies ONLY to citizens/PRs. For foreign workers: 0% CPF, only SDL 0.25% + Foreign Worker Levy.

Reform Timeline

EC 132/2023 replaces 5 indirect taxes (PIS, COFINS, IPI, ICMS, ISS) with CBS (federal) and IBS (state/municipal).

REFORM TIMELINE

- **2026** CBS 0.9% + IBS 0.1% pilot; existing taxes remain
- **2027** PIS/COFINS replaced by CBS; IPI zeroed (excl. Manaus)
- **2029–32** ICMS/ISS phase-out at 10%/year as IBS ramps
- **2033** Full transition: CBS + IBS as sole indirect taxes

Key Design Features

KEY DESIGN FEATURES

- **Destination principle:** tax collected where consumed, not produced — eliminates inter-state tax wars
- **Combined rate:** estimated ~ `26.5%` (one of the world's highest VAT rates)
- **Broad base:** fewer exemptions; reduced rates for health, education, agriculture

> **Impact:** Compliance simplification from 5 taxes to 2, but ~26.5% combined rate is steep. Model transition impact on pricing and cash flow.

II

International Tax Architecture

TERRITORIAL VS WORLDWIDE | CFC RULES | GILTI / BEAT / FDII | HOLDING STRUCTURES

FUNDAMENTALS

Territorial vs. Worldwide Tax Systems

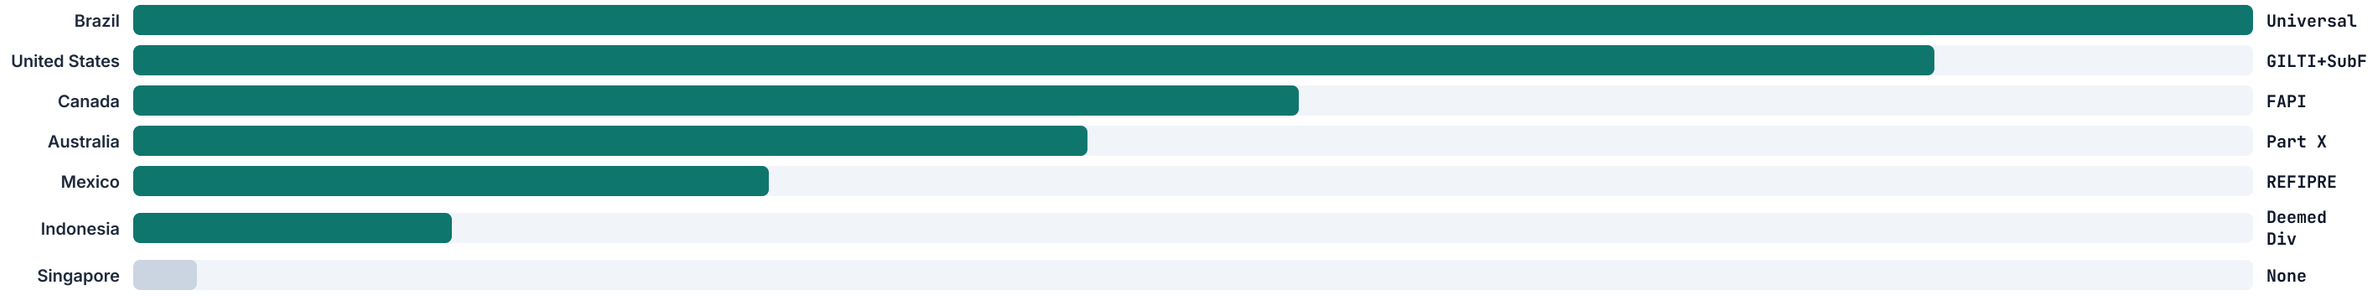
- **Territorial system** = only tax income earned domestically; foreign income generally exempt
  - **Singapore** is the only territorial system here — foreign income taxed only when remitted, with broad exemptions under ITA §13(8)
- **Worldwide system** = tax all income regardless of where earned; foreign taxes may be credited
  - US, Canada, Australia, Brazil, Mexico, Indonesia all use worldwide systems
  - Each country has CFC rules that determine *when* and *how* they tax foreign subsidiaries
- **Singapore as parent** = maximum flexibility (no CFC rules, no tax on foreign dividends/profits)
- **Brazil as parent** = most restrictive (universal CFC — all foreign profits taxed annually, zero deferral)
- **US as parent** = complex (GILTI imposes a 10.5% minimum tax on all CFC earnings)

> **Key takeaway:** Before choosing where to set up subsidiaries, first understand what your parent country will do with the profits earned abroad.

What Are CFC Rules & Why Do They Matter?

- **CFC** = Controlled Foreign Company — a foreign subsidiary where the parent country's residents own a controlling stake
- CFC rules force the parent to include certain foreign subsidiary income in its tax return — even if no dividends are paid

SEVERITY RANKING (MOST TO LEAST RESTRICTIVE)



Ownership & Income Triggers

OWNERSHIP & INCOME TRIGGERS

COUNTRY	THRESHOLD	INCOME CAUGHT
US	10%+50%	All CFC income via GILTI
Canada	10%+50%	Passive + service only
Australia	50%	Passive; 95% active test
Mexico	50%	Passive in <22.5% jurisdictions
Indonesia	50%	Passive (deemed dividend)
Brazil	50%	ALL income, any rate
Singapore	—	No CFC regime

Key Planning Points

KEY PLANNING POINTS

- **US GILTI HTE:** if CFC pays ≥ `18.9%` (90% of 21%), GILTI excluded; SG (17%) does NOT qualify
- **Canada FAPI:** active business income in treaty countries = "exempt surplus" — dividends flow tax-free
- **Australia Part X:** keep each CFC at 95%+ active income
- **Brazil:** no planning avoids CFC — maximize FTC (no carry-forward)

GILTI Worked Calculation

GILTI WORKED CALCULATION

Example: Singapore CFC with $50M tested income

LINE	AMOUNT
CFC Tested Income	$50,000,000
QBAI (tangible assets)	$100,000,000
NDTIR (10% × QBAI)	($10,000,000)
Net GILTI Inclusion	$40,000,000
§250 Deduction (50%)	($20,000,000)
Taxable @ 21%	$20,000,000
US Tax on GILTI	$4,200,000
Effective rate on $50M	8.4%

§250 phase-down: 50% drops to 37.5% after 2025 → effective GILTI rate rises to 13.125%

$ BEAT & FDII

⚠ BEAT & FDII

- **BEAT (IRC §59A):** `10%` minimum tax on "modified taxable income"; $500M threshold + ≥3% base erosion
- **FDII (IRC §250):** 37.5% deduction on foreign-market income = effective `13.125%`; phase-down to ~16.4% after 2025

> **Strategic tension:** GILTI incentivizes placing IP offshore (lower inclusion), while FDII incentivizes keeping IP onshore (lower export rate). Post-2025, the gap narrows significantly.

Universal CFC — Severity Analysis

UNIVERSAL CFC — SEVERITY ANALYSIS

- **Scope:** ALL foreign profits taxed at 34% annually (Lei 12.973 Arts. 76-92)
- **No active income exemption** — unlike every other country
- **FTC:** available but no carry-forward — use-it-or-lose-it
- **Consolidation:** CFC profits/losses may offset within same fiscal year

Implication: For Brazilian parents, optimize FTC utilization and use JCP for inbound flows. No holding structure avoids 34% CFC inclusion.

JCP Worked Example — R$100M Equity

$ JCP WORKED EXAMPLE — R$100M EQUITY

ITEM	DIVIDEND	JCP
Pre-tax Profit	R$100M	R$100M
JCP Deduction (~12%)	—	(R$12M)
Taxable Income	R$100M	R$88M
CIT @ 34%	(R$34M)	(R$29.9M)
WHT on JCP @ 15%	—	(R$1.8M)
Total Tax	R$34M (34%)	R$31.7M (31.7%)
Net to Parent	R$66M	R$68.3M

JCP saves ~2.3pp ETR. R$1B equity base saves ~R$23M/year.

STRUCTURING

How to Pick a Holding Company Jurisdiction

- **Start with your parent country's CFC regime** — this is the #1 factor, not the holding company's local tax rate
- **Singapore parent** → use Singapore itself (no CFC, 0% WHT, 0% CGT, 90+ treaties)
- **Canada parent** → hold subsidiaries in treaty countries for "exempt surplus" (ITA §113)
- **Australia parent** → ensure each foreign sub has 95%+ active income for Part X
- **US parent** → structure for GILTI HTE (≥18.9% ETR); consider FDII for US-based exports
- **Mexico parent** → ensure subs have >75% active income, pay >22.5% local rate
- **Brazil parent** → no holding structure avoids universal CFC; focus on FTC + JCP

Use a Branch When

USE A BRANCH WHEN

- Expecting initial **losses** — branch losses offset HQ profits
- **Temporary projects** — may stay below PE thresholds
- **Brazil or Australia** operations — 0% branch profits tax
- **Singapore** operations — 0% branch tax, 17% CIT

Use a Subsidiary When

USE A SUBSIDIARY WHEN

- **Profitable from start** — access local incentives (Tax Holiday, Pioneer, SBD)
- **Long-term** — asset protection, credibility, reinvestment
- **Treaty WHT** on dividends often much lower than branch profits tax
- **Indonesia** — Tax Holiday (0% CIT for 5-20 years)

III

Treaty Networks, WHT & Profit Repatriation

WHT RATES | FTC BASKETS | FRANKING CREDITS | FSIE | REPATRIATION

Default vs Best Treaty Rate (Dividends)

DEFAULT VS BEST TREATY RATE (DIVIDENDS)

COUNTRY	DEFAULT	BEST TREATY
Singapore	0%	0%
Brazil	0%	0%
Mexico	10%	0%
Indonesia	20%	10%
Canada	25%	5%
United States	30%	5%
Australia	30%	0% (franked)

Key Investment Corridors

KEY INVESTMENT CORRIDORS

- **US ↔ Canada:** dividends 5%, interest 0%, royalties 0-10%
- **SG ↔ Indonesia:** dividends 10%, interest 10%, royalties 10%
- **SG ↔ Australia:** dividends 15%, interest 10%, royalties 10%
- **CA ↔ Australia:** dividends 5%, interest 10%, royalties 10%
- **BR ↔ Mexico:** dividends 10%, interest 15%, royalties 10-15%

> **Critical:** US ↔ Singapore has NO comprehensive tax treaty — only limited shipping/aircraft agreement. Creates 30% WHT exposure on US-source dividends to SG parents.

Repatriating $10M to a Singapore Parent

CASH RECEIVED AFTER ALL TAXES ($10M PRE-TAX PROFIT)

- **Brazil JCP route** is the best — JCP deductible against 34% CIT, only 15% WHT = ~15% effective
- **Singapore FSIE:** all sources exempt when remitted (headline rate ≥15% for all 6 countries)
- **FX controls:** Indonesia requires BI reporting; Brazil requires BCB RDE-IED registration + IOF

US FTC Basket System (IRC §904(d))

US FTC BASKET SYSTEM (IRC §904(D))

- **General basket:** active business income — 10-year carry-fwd, 1-yr carry-back
- **Passive basket:** dividends, interest, royalties — 10-yr carry-fwd, 1-yr carry-back
- **GILTI basket:** CFC tested income — `NO carry-fwd/back`; limited to 80% of foreign taxes
- **Foreign branch basket:** branch income — 10-yr carry-fwd, 1-yr carry-back
- **Cross-basket limitation:** excess credits in one basket CANNOT offset tax in another

Other Jurisdictions

OTHER JURISDICTIONS

COUNTRY	METHOD	CARRY-FWD
Canada	Per-country, biz/non-biz	10yr / none
Australia	Single pool (FITO)	None
Singapore	Per-country + pooling	None
Indonesia	Per-country	None
Mexico	Per-country	None
Brazil	Per-country + reciprocity	None

Risk: In ID, MX, BR, AU — excess FTCs are permanently lost. Plan pricing and dividend timing to match FTC capacity each year.

WORKED EXAMPLE

FTC Basket Calculation: Multi-Jurisdiction Case

US parent claiming FTC on repatriated dividends from SG, ID & AU subsidiaries (all General Basket)

ITEM	SG SUB	ID SUB	AU SUB	TOTAL
Foreign Pre-tax Income	$10M	$8M	$6M	$24M
Local CIT Paid	$1.7M (17%)	$1.76M (22%)	$1.8M (30%)	$5.26M
WHT on Dividends	$0 (0%)	$0.62M (10%)	$0 (franked)	$0.62M
Total Foreign Tax	$1.7M	$2.38M	$1.8M	$5.88M
US Tax @ 21%	$2.1M	$1.68M	$1.26M	$5.04M
FTC Allowed (capped)	$1.7M	$1.68M	$1.26M	$4.64M
Excess / (Shortfall)	($0.4M)	$0.7M excess	$0.54M excess	$0.84M excess
Net US Tax Due	$0.4M	$0	$0	$0.4M

Result: SG under-credits (17% < 21%), but excess credits from ID/AU cross-credit within same basket. Net US tax: $0.4M on $24M = 1.7% incremental. Combined ETR: 26.2%.

Australia Franking Credit System Deep-Dive

SCENARIO A: FULLY FRANKED DIVIDEND

- AU sub earns A$10M pre-tax
- CIT @ 30%: `(A$3M)`
- After-tax: A$7M
- Franking credit: A$3M
- WHT on franked: `0%` (Div. 202)
- Cash to SG parent: **A$7M**
- Total ETR: `30%`
- SG FSIE: exempt

VS

SCENARIO B: UNFRANKED DIVIDEND

- AU sub earns A$10M pre-tax
- CIT @ 30%: `(A$3M)`
- After-tax: A$7M
- No franking credit
- WHT @ 15% treaty: `(A$1.05M)`
- Cash to SG parent: **A$5.95M**
- Total ETR: `40.5%`
- **10.5pp worse**

Div. 802 (conduit foreign income): foreign income through AU can be distributed at 0% WHT to non-residents. Always maintain sufficient franking account balance.

FSIE 3-Condition Test (ITA §13(8))

FSIE 3-CONDITION TEST (ITA §13(8))

- **Condition 1:** income subject to tax in source (headline ≥15%)
- **Condition 2:** highest CIT of source country ≥15%
- **Condition 3:** SG tax-resident + economic substance

DTT (DOMESTIC TOP-UP TAX)

- DMTT effective **1 January 2025** for MNEs >€750M; top-up stays in Singapore
- **SBIE:** 5% payroll + 5% tangible assets deducted from GloBE base

Pioneer + Pillar 2 Worked Example

PIONEER + PILLAR 2 WORKED EXAMPLE

Pioneer company: 5% CIT → 15% after DTT

ITEM	PRE-PILLAR 2	POST-PILLAR 2
Qualifying Income	S$50M	S$50M
Pioneer CIT @ 5%	(S$2.5M)	(S$2.5M)
GloBE ETR	5%	5%
DTT Top-up (15%-5%)	—	(S$5M)
Total Tax	S$2.5M (5%)	S$7.5M (15%)

Impact: For in-scope MNEs, Pioneer/DEI/GTP effectively floor at 15%. Groups under €750M are unaffected.

IV

Debt Structuring & Interest Limitation

THIN CAP | EBITDA LIMITS | EIFEL | MULTI-TIER LEVERAGE

EBITDA-Based Limits

EBITDA-BASED LIMITS

COUNTRY	LIMIT	DETAIL
US	30% ATI	$29M de minimis; indefinite carry-fwd
Canada	30% EBITDA	EIFEL (June 2024); C$250K de minimis; 20yr carry-fwd
Mexico	30% + 3:1	Hybrid; 10yr carry-fwd
Australia	30% EBITDA	From July 2024; A$2M de minimis; 15yr carry-fwd

DER & Other Limits

DER & OTHER LIMITS

COUNTRY	LIMIT	DETAIL
Indonesia	4:1 DER	Generous; excess permanently lost
Brazil	2:1 DER	0.3:1 for tax haven lenders
Singapore	No limit	Arm's length only (ITA §34D)

Design principle: Structure intercompany debt *before* operations begin. Exceeding limits creates permanent disallowance in most jurisdictions.

CASE STUDY

Multi-Tier Leveraging: SG → ID & AU Case Study

SG Parent
Lender — 17% CIT
No thin cap limit

→

ID Sub
Borrower — 22% CIT
4:1 DER limit

|

AU Sub
Borrower — 30% CIT
30% EBITDA limit

ID: $20M LOAN @ 6%

EBITDA	$8M
DER Test: $20M/$5M = 4:1	PASS
Interest Expense	$1.2M
Tax Shield (22%)	$264K
WHT on Interest (10%)	($120K)
Net Annual Benefit	$144K

AU: $15M LOAN @ 5.5%

Tax-EBITDA / 30% cap	$6M / $1.8M
EBITDA Test: $825K < $1.8M	PASS
Interest Expense	$825K
Tax Shield (30%)	$247.5K
WHT on Interest (10%)	($82.5K)
Net Annual Benefit	$165K

Combined: $309K/year on $35M deployed. SG deducted at 22-30%, included at 17% = rate arbitrage.

EIFEL Rules (ITA §18.2)

EIFEL RULES (ITA §18.2)

- **Effective:** June 2024; cap at 30% of tax-EBITDA
- **Scope:** applies to *both related and arm's length* lenders
- **De minimis:** C$250K net interest
- **Carry-forwards:** excess capacity 20yr; restricted interest 20yr
- **Excluded:** CCPCs with taxable capital ≤C$50M

SBD Phase-Out Traps

⚠ SBD PHASE-OUT TRAPS

- **SBD:** 9% federal on first C$500K for CCPCs
- **Capital grind:** reduced when taxable capital >C$10M; eliminated at C$15M
- **Passive income grind:** reduced C$5 per C$1 AAII above C$50K; eliminated at C$150K
- **SR&ED interaction:** CCPCs get 35% refundable ITC on first C$3M R&D

Planning: C$10M–$15M capital band is critical. Monitor taxable capital and passive income simultaneously.

V

R&D Strategy, Incentives & BEPS Pillar 2

R&D CREDITS | TAX HOLIDAYS | GLOBE RULES | QRTC VS RATE REDUCTION

R&D STRATEGY

Where to Place Your R&D Hub

- **Singapore (EIS):** 400% deduction (ITA §14C) — $1M = $272K saving; RATE REDUCTION
- **Indonesia:** 300% super deduction — $1M = $440K; BRIN-approved; RATE REDUCTION
- **Canada (CCPC):** 35% refundable ITC on first C$3M — $1M = $350K; QRTC
- **Australia (small):** 43.5% refundable offset — $1M = $185K; QRTC
- **United States:** 20% R&D credit (IRC §41) — $1M = $200K; QRTC

Pillar 2 rule: For MNEs >€750M, choose QRTC (Canada, Australia, US) over rate reductions (SG, ID). QRTCs are excluded from GloBE ETR calculation.

WORKED EXAMPLE

R&D Hub Arbitrage: $5M Spend Comparison

ANNUAL TAX SAVING ON $5M QUALIFYING R&D — PRE VS POST PILLAR 2

COUNTRY	MECHANISM	PRE-PILLAR 2	POST-PILLAR 2	TYPE
Indonesia	300% super deduction	$2,200K	$1,250K	RATE RED.
Singapore	EIS 400% deduction	$1,360K	$750K	RATE RED.
Brazil	80% extra deduction	$1,360K	$1,360K	RATE RED.
Canada	35% refundable ITC	$1,050K	$1,050K	QRTC
United States	20% R&D credit	$1,000K	$1,000K	QRTC
Australia	43.5% refundable offset	$925K	$925K	QRTC
Mexico	30% incremental credit	$750K	$750K	CREDIT

Post-Pillar 2 winner: Canada & Australia maintain full R&D benefits (QRTC excluded from GloBE). SG & ID lose 40-45% of their R&D advantage for in-scope MNEs.

Indonesia Tax Holiday Tiers

INDONESIA TAX HOLIDAY TIERS

- `100%` CIT exemption for 5-20 years (PMK 130/2020)
- 50% CIT reduction for 2 additional years
- **Tax Allowance:** 30% over 6yr + NOL extended to 10yr
- **KEK:** 10-100% for 25 years

Mexico & Singapore

MEXICO & SINGAPORE

- **MX Border Zone:** ~20% ISR (1/3 credit) + 8% IVA
- **IMMEX:** duty-free + safe harbour TP (6.9% assets / 6.5% costs)
- **SG Pioneer:** `0-5%` for 5-15yr
- **SG DEI:** 5-10% concessionary
- **SG GTP:** 5-10% on trading

Other Highlights

OTHER HIGHLIGHTS

- **BR SUDENE/SUDAM:** 75% IRPJ reduction for 10yr
- **CA Clean Tech:** 30% refundable ITC (QRTC)
- **AU Small Biz CGT:** up to 100% exemption
- **US FDII:** 13.125% on exports
- **US Opp. Zones:** IRC §1400Z-2

BEPS PILLAR 2

Global Minimum Tax: What Changes in 2025

- **What:** 15% minimum ETR for MNEs >€750M consolidated revenue
- **How:** if ETR in any jurisdiction <15%, parent collects top-up tax
- **Adoption:** SG, CA, AU adopted DMTT; BR, ID under consideration; MX, US no action
- **SBIE:** 5% payroll + 5% tangible assets deducted from GloBE base

Worked Pillar 2 Calculation — SG Entity

WORKED PILLAR 2 CALCULATION — SG ENTITY

ITEM	AMOUNT
GloBE Income	S$100M
CIT Paid @ 17%	S$17M
SBIE (payroll S$20M × 5%)	(S$1M)
SBIE (assets S$50M × 5%)	(S$2.5M)
Adjusted GloBE Income	S$96.5M
ETR = S$17M / S$96.5M	17.6%
Top-up Tax	NIL (ETR > 15%)

Key insight: Singapore's 17% standard rate already exceeds 15% GloBE minimum. Top-up mainly affects Pioneer/DEI/GTP concessionary rates.

PILLAR 2 IMPACT

✅ Survives Pillar 2

✅ SURVIVES PILLAR 2

- **CA SR&ED** 35% ITC — QRTC
- **AU R&D** 43.5% — QRTC
- **US R&D** 20% credit — QRTC
- **CA Clean Tech** 30% ITC — QRTC
- **SG/ID/MX standard** rates above 15%

PILLAR 2 IMPACT

⚠️ Diminished

⚠️ DIMINISHED

- **SG Pioneer/DEI/GTP** 0-10% → topped to 15%
- **SG EIS** 400% — rate effect capped
- **ID Tax Holiday** 0% → topped to 15%
- **ID 300% Super / KEK** — capped at 15%
- **BR SUDENE** — may push <15%

Unaffected (<€750M)

UNAFFECTED (<€750M)

- **SG SUTE/PTE** — targets SMEs
- **ID MSME** 0.5% — IDR 4.8B cap
- **BR Simples** — R$4.8M cap
- **CA SBD** 9% — C$500K limit
- All incentives intact for sub-threshold groups

Action: For in-scope MNEs, restructure R&D/IP from rate-reduction to QRTC jurisdictions (Canada, Australia).

EIS 400% Deep-Dive

EIS 400% DEEP-DIVE

- **Scope:** R&D performed in SG on qualifying activities (ITA §14C)
- **Deduction:** 400% of qualifying expenditure; cap S$400K benefit/YA
- **Cash payout:** 20% on up to S$100K for startups
- **Pillar 2:** DTT erodes benefit for MNEs >€750M

Strategy: Sub-€750M: EIS delivers maximum value. In-scope MNEs: split R&D — keep EIS for SBIE-eligible activities, move balance to CA/AU for QRTC.

PTE vs SUTE — S$200K Chargeable Income (Yr 1)

PTE VS SUTE — S$200K CHARGEABLE INCOME (YR 1)

ITEM	PTE	SUTE (YR 1-3)
1st S$10K/S$100K @ 75% exempt	S$2.5K	S$25K
Next S$190K/S$100K @ 50%	S$95K	S$50K
Total Taxable	S$97.5K	S$75K
Tax @ 17%	S$16,575	S$12,750
Effective Rate	8.29%	6.38%

SUTE saves S$3,825/yr vs PTE in years 1-3. Both below Pillar 2 threshold.

VI

Transfer Pricing, PE Risk & Anti-Avoidance

TP DOCUMENTATION | PE THRESHOLDS | GAAR | DPT | BRAZIL OECD SHIFT

What You Need to Prepare

WHAT YOU NEED TO PREPARE

- All 7 jurisdictions require **arm's length** pricing
- **Master File + Local File:** required everywhere (Master File not required in US)
- **Brazil:** Lei 14.596/2023 shifted to OECD standard from 2024
- **Penalties:** US 20-40% | CA 10% | MX 50-75% | AU 25-50%

Methods & Enforcement

METHODS & ENFORCEMENT

- **CUP** — Comparable Uncontrolled Price
- **TNMM / CPM** — most commonly used
- **Profit Split / Cost Plus** — integrated ops & manufacturing

Australia DPT: Diverted Profits Tax imposes 40% penalty rate on MNEs with >A$1B global + >A$25M AU revenue. 10pp above standard CIT.

PE RISK

Permanent Establishment: When Does a Tax Obligation Arise?

- **PE** = sufficient presence triggering local tax obligations on attributable profits
- **Construction PE:** ID, BR, MX: `6 months` | US, CA, AU, SG: `12 months`
- **Service PE:** Indonesia `60 days` (extremely short) | BR, MX, CA, AU, SG: 183 days | US: no specific rule
- **Agent PE:** dependent agent concluding contracts creates PE in all 7 jurisdictions
- **Indonesia risks:** 18 PE categories (broadest); DGT Form required for treaty relief
- **Digital PE:** no formal digital PE in any jurisdiction; ID applies VAT, AU uses MAAL

Construction PE Threshold Arbitrage

PE THRESHOLD COMPARISON ACROSS 7 JURISDICTIONS

COUNTRY	CONSTRUCTION PE	SERVICE PE	AGENT PE	DIGITAL PE
United States	12 months	No specific rule	Yes (common law)	No
Canada	12 months	183 days	Yes (ITA §253)	No (DST separate)
Indonesia	6 months	60 days	Yes (18 categories)	No (VAT only)
Brazil	6 months	183 days	Yes (RIR Art. 399)	No
Mexico	6 months	183 days	Yes (LISR Art. 168)	No
Australia	12 months	183 days	Yes (ITAA 1936)	No (MAAL/DPT)
Singapore	12 months	183 days	Yes (ITA §12)	No

High-risk: ID 60-day service PE — 2 months on-site creates full PE. Structure short rotations with different personnel.

Mitigation: Split large projects into sub-threshold phases; use local subcontractors; track individual days carefully.

Domestic GAARs

DOMESTIC GAARS

- **US:** Economic Substance Doctrine (IRC §7701(o))
- **Canada:** ITA §245 — misuse/abuse test
- **Australia:** Part IVA — dominant purpose test
- **ID / BR / MX:** substance over form; business purpose required
- **Singapore:** ITA §33 — arrangement to avoid tax disregarded

Treaty Anti-Abuse

TREATY ANTI-ABUSE

- **LOB:** requires genuine resident status + substantial activities (US, SG, CA, MX, ID)
- **PPT:** denies benefits if main purpose was obtaining benefit (CA, AU, SG, MX via MLI)
- **US has NOT signed the MLI** — no PPT in US treaties

> **Substance:** Every holding/IP/financing entity must have genuine management, staff, and office. Shell entities face GAAR + treaty denial + Pillar 2 SBIE denial.

VII

Investment Corridor Analysis & Case Studies

SG → ID | SG → AU | US → CA | MX MAQUILA | LOSS UTILIZATION

CORRIDOR ANALYSIS

ETR Walk-Through: $10M Pre-Tax Profit

SG Parent
17% CIT | 0% WHT out
FSIE exempt

← Dividends

ID Subsidiary
22% CIT | 10% WHT
(SG-ID DTA)

ETR WALK-THROUGH: $10M PRE-TAX PROFIT

STEP	AMOUNT	RATE
1. ID CIT @ 22%	($2,200,000)	22.0%
2. After-tax profit	$7,800,000	
3. WHT on dividends @ 10%	($780,000)	7.8%
4. Cash received in SG	$7,020,000	
5. SG FSIE exemption	$0	0%
Combined ETR	$2,980,000	29.8%

Optimization Levers

OPTIMIZATION LEVERS

- **Tax Holiday:** 0% CIT → ETR drops to `10%` (WHT only)
- **Listed discount:** 19% CIT = `27.5%` combined
- **Reinvestment exemption:** 0% WHT if reinvested within 3yr (PP 9/2021)
- **Intercompany interest:** 22% deduction in ID vs 17% income in SG = 5pp arbitrage
- **R&D in ID:** 300% super deduction reduces taxable income

> **Optimized:** Tax Holiday + reinvestment exemption → 0% ETR during holiday period.

CORRIDOR ANALYSIS

SG → AU Corridor: Franking vs Unfranked

FRANKED DIVIDEND ROUTE

- AU Sub pre-tax: A$10M
- CIT @ 30%: (A$3M)
- After-tax: A$7M
- Franking credit: A$3M
- WHT: `0%`
- Cash to SG: **A$7M**
- Combined ETR: `30%`

VS

UNFRANKED DIVIDEND ROUTE

- AU Sub pre-tax: A$10M
- CIT @ 30%: (A$3M)
- After-tax: A$7M
- No franking credit
- WHT @ 15%: `(A$1.05M)`
- Cash to SG: **A$5.95M**
- Combined ETR: `40.5%`

Franking matters: 10.5pp ETR difference. BRE route (25% CIT) with franking = 25% combined ETR.

Conduit (Div. 802): foreign income through AU distributed at 0% WHT. AU R&D 43.5% offset is QRTC-safe.

CORRIDOR ANALYSIS

CA Subsidiary (Ontario) → US Parent

CA SUBSIDIARY (ONTARIO) → US PARENT

STEP	AMOUNT	RATE
CA Pre-tax Income	C$10M	
CA CIT (15% fed + 11.5% ON)	(C$2.65M)	26.5%
After-tax profit	C$7.35M	
WHT on dividends (US-CA 5%)	(C$367.5K)	3.7%
Cash to US parent	C$6.98M	
Combined ETR	C$3.02M	30.2%

US §245A DRD: 100% dividends-received deduction eliminates US tax on CA dividends.

CORRIDOR ANALYSIS

GILTI High-Tax Exclusion

GILTI HIGH-TAX EXCLUSION

- CA CIT rate `26.5%` exceeds GILTI HTE threshold of `18.9%` (90% of 21%)
- **With HTE:** CA income excluded from GILTI — zero additional US tax
- **Without HTE:** US would include at 10.5% with 80% FTC limitation — creates double taxation
- **Result:** total ETR = 26.5% CA rate + 3.7% WHT = `30.2%`

> **SR&ED bonus:** CA CCPC subsidiary claims 35% refundable ITC on R&D. This is a cash credit (not rate reduction) — reduces CA ETR without affecting GILTI HTE qualification.

CORRIDOR ANALYSIS

IMMEX Safe Harbor — $50M Assets, $30M Costs

IMMEX SAFE HARBOR — $50M ASSETS, $30M COSTS

ITEM	AMOUNT
Option A: 6.9% of assets	$3,450,000
Option B: 6.5% of costs	$1,950,000
Taxable income (higher)	$3,450,000
CIT @ 30%	($1,035,000)
ETR on assets	2.07%
ETR on costs	3.45%

Border Zone Stacking

BORDER ZONE STACKING

- **Northern/Southern Border:** ISR 1/3 credit = ~ `20%` effective (vs 30%)
- **IVA:** `8%` vs 16% standard
- **Stacking IMMEX + Border:**

IMMEX taxable base	$3,450,000
Border zone effective rate	~20%
Total tax	$690,000
ETR on $30M costs	~2.3%

US nearshoring play: Maquila + border zone = 2-3% manufacturing ETR with duty-free US access under USMCA.

ADVANCED STRATEGY

Branch-to-Subsidiary Conversion

BRANCH-TO-SUBSIDIARY CONVERSION

- **Yr 1-2** **Branch Phase:** startup losses offset parent's home-country income
- **Yr 3-4** **Convert to Subsidiary:** access Tax Holiday, SBD, BRE, PTE incentives
- **Ongoing** **Optimize Repatriation:** treaty WHT, franking, JCP, FSIE

Key NOL Rules by Country

KEY NOL RULES BY COUNTRY

COUNTRY	CARRY-FWD	CARRY-BACK	CAP
SG	Indefinite	1yr (S$100K)	100%
AU	Indefinite	1yr (<$5B)	100%
US	Indefinite	None	80%
CA	20yr	3yr (refund)	100%
MX	10yr	None	100%
ID	5yr	None	100%
BR	Indefinite	None	30%

Indonesia risk: 5-year window means startup losses can permanently expire. Always consider branch phase for ID operations.

VIII

Investor Framework, Screening & Exit Planning

FDI SCREENING | NON-RESIDENT CGT | SCORECARD | EXIT STRATEGY

Screening Bodies & Thresholds

SCREENING BODIES & THRESHOLDS

- **Singapore:** minimal; 1-3 day registration; `9/10` openness
- **Canada (ICA):** C$1.326B (WTO); C$512M (SOEs); any for security
- **US (CFIUS):** no $ threshold for national security; 45+45 day review
- **Australia (FIRB):** A$310M (agreement); A$0 for national security + residential

Other Markets

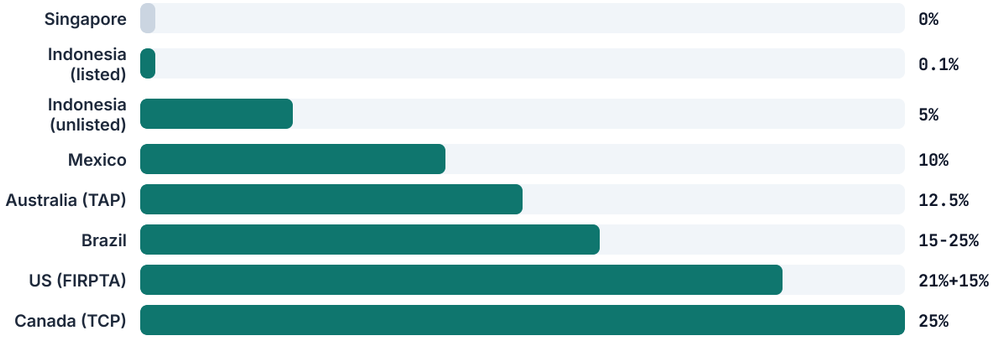
OTHER MARKETS

- **Mexico:** petroleum/electricity restricted; 10-49% caps on transport, telecom
- **Indonesia:** BKPM registration required; Positive Investment List; no freehold land
- **Brazil:** BCB registration; media 30%, airlines 20% voting caps

Openness ranking: SG (9) > CA (8) > US = AU (7) > MX (6) > ID = BR (5)

Non-Resident Capital Gains Tax on Share Disposal

CGT RATE COMPARISON



Exit planning: Structure disposals through Singapore (0% CGT). For US real property: use REIT for FIRPTA exceptions. For CA/AU: ensure shares are not "real property rich."

DECISION MATRIX

Overall Rankings (Post-Pillar 2 Adjusted)

OVERALL RANKINGS (POST-PILLAR 2 ADJUSTED)

DECISION MATRIX

Scoring Dimensions

SCORING DIMENSIONS

- Investment openness & repatriation ease
- Dividend + capital gains tax efficiency
- CFC regime severity
- Treaty network breadth & PE risk
- **Pillar 2 impact** NEW

Post-2025: SG still dominates for holding/IP. AU & CA gain for R&D. ID loses most for large MNEs.

Q1: Where Is Your Parent Company?

Q1: WHERE IS YOUR PARENT COMPANY?

- **SG parent** → maximum flexibility (no CFC)
- **US parent** → plan for GILTI (push ETR ≥18.9%)
- **BR parent** → optimize FTC + JCP (universal CFC)

Q2: WHAT ACTIVITY?

- **Manufacturing** → MX (IMMEX), ID (Tax Holiday)
- **R&D / IP** → SG (EIS), CA (SR&ED), AU (43.5%)
- **Trading / Treasury** → SG (GTP 5-10%)

Q3: Profitability Timeline?

Q3: PROFITABILITY TIMELINE?

- **Expecting losses** → branch to offset HQ profits
- **Immediately profitable** → subsidiary for incentives
- **Long-term** → ID Tax Holiday (up to 20yr)

Q4: EXIT STRATEGY?

- **Share sale** → SG (0% CGT)
- **Ongoing dividends** → AU (franked 0% WHT) or BR (JCP)

IX

Execution, Compliance & Statutory Authority

CHECKLIST | LEGISLATION INDEX | PILLAR 2 COMPLIANCE | EIFEL

Pre-Entry

PRE-ENTRY

- [ ] Assess parent country CFC exposure
- [ ] Select holding jurisdiction (CFC + treaty)
- [ ] Run branch vs subsidiary ETR analysis
- [ ] Design capitalization within thin cap / EIFEL
- [ ] Apply for incentives (Tax Holiday, Pioneer, SR&ED)
- [ ] Establish TP policy + documentation
- [ ] Assess Pillar 2 in-scope status (>€750M)

Operational

OPERATIONAL

- [ ] Maintain Master File + Local File + CbCR
- [ ] Monitor thin cap DER / EBITDA quarterly
- [ ] Track NOL carry-forwards within limits
- [ ] Optimize R&D location (QRTC vs rate red.)
- [ ] Maintain economic substance for all entities
- [ ] Monitor PE exposure for services
- [ ] Track Pillar 2 GloBE returns (GIR)

Repatriation & Exit

REPATRIATION & EXIT

- [ ] Use JCP (not dividends) for Brazil
- [ ] Time dividend declarations for AU franking
- [ ] Plan disposals through SG (0% CGT)
- [ ] Review FIRPTA / TCP before US/CA exits
- [ ] Monitor FSIE conditions for SG receipt

STATUTORY AUTHORITY

Primary Legislation Index

- **United States** — IRC, TCJA 2017, IRA 2022
- **Canada** — ITA, Excise Tax Act
- **Indonesia** — UU 7/2021 (HPP), UU 36/2008
- **Brazil** — RIR/2018, Lei 9.249/1995, Lei 12.973/2014
- **Mexico** — LISR, CFF, Ley del IVA, LIE
- **Australia** — ITAA 1997, ITAA 1936, GST Act, FATA
- **Singapore** — ITA 1947, GST Act, CPF Act, DMTT Act 2024
